Week 7 | Friday checks

2026-12-04 | Three brief items per check. Record accuracy and support separately.

Spelling

Use three words explicitly taught from each learner's current HMH sound-spelling pattern. Say the word, use it in a sentence, repeat it. Record encoding separately from supported pattern recognition. Words: _____ _____ _____.

Grade 3 reading | Action Jackson

Use the actual book, with the planned access supports.

1. Who is here, where are they, and what happens first?

Teacher key: Names or points to the character, setting or event.

2. What does a character do about the problem?

Teacher key: Shows a character action in the selected scene.

3. What happens next or at the end?

Teacher key: Sequences the next or ending event from the book.

Grade 4 reading | Action Jackson

Use the actual book, with the planned access supports.

1. What problem or important event is shown in this scene?

Teacher key: Identifies a problem or important event actually shown.

2. What does a character do, and why?

Teacher key: Explains a character action or choice with support.

3. How does that action affect the result? Show the page or illustration.

Teacher key: Connects the action to the result using page evidence.

Math | Week 7

Grade 3

3.3F | 3.3G

1. Match one half to two fourths.
2. Match one third to two sixths.
3. Show two names for the same amount with fraction strips.

Teacher key

Equivalent matches; equivalent matches; valid equivalent pair

Grade 4

4.3C | 4.3D

1. Compare two thirds and one third.
2. Compare one half and three fourths.
3. Show why two fourths equals one half.

Teacher key

2/3 greater; 3/4 greater; same amount on equal-size wholes

Science | Week 7

Grade 3

3.8B

1. Plan slow and faster runs of the same car into the same foam block; name what stays the same.

2. Run and repeat the comparison, resetting the block. Identify observed speed and block movement.

3. Use the observed effect on the block to explain how speed relates to mechanical energy.

Teacher key

Keeps car/block/surface/collision point fixed; records actual observations; faster motion of the same object has more mechanical energy, supported by the observed greater effect. Recheck setup if results are inconsistent.

Grade 4

4.7

1. Predict whether a magnet attracts a paper clip.

2. Test a paper clip and a wooden craft stick.

3. Sort the objects by observed magnetic attraction.

Teacher key

Prediction stated; both tested; paper clip attracted, wooden stick not

Additional product: Writing

Writing: one clear idea, relevant detail/reason and understandable communication. Social studies: a correct person/event or community claim, relevant source evidence and supported connection. Score each criterion 0/1 with prompts noted; apply school grading rules.
